FEATURE

The 50th session of the Codex Alimentarius Committee on Food Additives (CCFA50) has completed its full agenda and found consensus on many new food additives provisions, which has reduced significantly the backlog from past years on miscellaneous food additives, with a good perspective to complete this task at its next session (almost two years ahead of schedule). And, against all odds, CCFA50 agreed for the first time since 2012 to work on a handful number of colour additive provisions in a limited number of confectionery categories for possible adoption as of the 2019 CCFA51 session (i.e. part of the GSFA mandate) as a test case for all the colour pending provisions. The Committee also modernised some of its internal procedures – and relations with JECFA – to speed up future work. CCFA50 seems to have slightly changed its mind about enzymes since last year and agreed to give a higher consideration to enzymes in the future, especially for their review by JECFA. The Committee also endorsed internal guidelines with other Codex Committees on the crucially important alignment between food additives provisions in the GSFA and those approved in Commodity Standards. As a good example, CCFA50 has completed the alignment work for fish and fishery products standards fully, and in the future, it will also rely more on active Codex commodity committees to perform such an alignment task. Last but not the least – and totally unexpectedly – CCFA50 agreed to start again the discussion on Note 161 related to some provisions on intense sweeteners, where left unanswered three years ago <i>By Christophe Leprêtre and Katia Merten-Lenz</i>	19
